Professional Summary

Full-stack software engineer building financial-close software with TypeScript, React, and Node.js. Promoted to Software Engineer II within one year at FloQast. Experience modernizing production applications, improving developer tooling, and leading incident response and defect prevention.

Technical Skills

Languages & frameworks: TypeScript, JavaScript, React, Node.js, Express.js

Data & platform: MongoDB, PostgreSQL, AWS ECS, AWS Lambda, REST APIs

Quality & tooling: Vitest, React Testing Library, CI/CD, Git, Nx, Oxcint, Oxfmt, AI-assisted development

Professional Experience

FloQast — Remote

Software Engineer II | April 2026–Present

- Reduced measured combined CI lint/format runner time by 73%, from 9m 32s to 2m 35s, by introducing Oxcint and Oxfmt across four Journal Entry Management projects.
- Modernized the JEM frontend from React 16 to 18, React Router 4 to 6, and styled-components 5 to 6; completed the client Vitest cutover with 6,888 passing tests across 599 files.
- Extended shared development tooling to support monorepo worktrees and coding agents; reduced the injected JEM development bundle from 14.12 MB to 5.62 MB in measured local testing.
- Implemented staged storage-provider migration components, including compatibility adapters, document persistence, and flag-controlled REST integration; added cutover and rollback controls.
- Served as incident commander for an SFTP upload regression, coordinating fixes across three branches and adding regression coverage; selected for a cross-team customer-found-defect prevention initiative.

Software Engineer I | April 2025–April 2026

- Led the backend migration to Vitest, improving test execution speed by approximately 40×.
- Led the Documents domain refactor, separating API, service, and repository responsibilities and achieving approximately 100% test coverage in the refactored domain.
- Resolved 19 defects in Q3 2025, contributing to Close Engineering's 91% year-over-year reduction in open defects, from 214 to 20.

Valero St. Charles Refinery — Norco, Louisiana

Control Systems Engineering Intern | May–August 2021

- Identified and mitigated 1,300 alarm rationalization issues across 75,000 distributed control system function blocks; automated alarm audits with VBA.

Valero Meraux Refinery — Meraux, Louisiana

Process Engineering Intern | Summer 2020

- Led a wastewater caustic-control improvement project, coordinating engineering changes across departments.

Education

Certificate, Software Engineering — Chegg Skills | October 2024

Coursework in Chemical Engineering — University of Louisiana at Lafayette
